Custom steam wands for coffee machines

Steam wands developed to your machine's specifications
Shape, ball joint, U-CAN TOUCH insulation, tip, probe

KEY FEATURES
- Customizable settings
- A project approach
- A close partner

Description

Beyond its standard range, Italcoppie develops steam wands fully tailored to the manufacturer's machine. DYNATIME supports Swiss coffee machine manufacturers through the definition, prototyping and industrialisation of their wand.

Customizable settings

Tube shape and bend, ball joint type and freedom of movement, U-CAN TOUCH thermal protection, number of holes and tip material, anti-burn sleeve, and integration of an NTC, PT1000 or thermocouple probe.

A project approach

Development starts from your constraints: ergonomics, machine design, frothing performance and food standards. Prototypes are produced for validation before series production.

A close partner

DYNATIME ensures the technical and commercial link in the Swiss Romandy and German-speaking regions, in French, and monitors your supplies over time.

Typical applications

- New professional espresso machines
- Super-automatic machines
- Evolution or restyling of an existing machine
- Automatic frothing functions

Technical specifications

Options

Tube	Shape, bend, diameter, U-CAN TOUCH or U-CAN TOUCH PLUS insulation
Articulation	Hip joint and range of motion
Finish	Number of holes, material (inox, PEEK, frit)
Protection	Muff or anti-burn coating
Probe	NTC, PT1000 or integrated thermocouple
Ending	Connector according to your electronics

Non-contractual document. Specifications subject to technical changes. Edition 11/2026.
