Insulated hot water wand with integrated probe N028032A

Insulated hot water wand U-CAN TOUCH, curved
Integrated type K thermocouple, swivel mount

KEY FEATURES

- Integrated K thermocouple
- U-CAN TOUCH technology
- Construction
- For machine manufacturers

Description

The Italcoppie N028032A integrates a type K thermocouple into an insulated U-CAN TOUCH hot water wand. The machine knows the actual temperature of the water dispensed, which is useful for tea, infusions or dosing functions.

Integrated K thermocouple

The Ø 2 mm K thermocouple with mineral insulation measures the temperature closest to the water outlet.

U-CAN TOUCH technology

Italcoppie's U-CAN TOUCH technology thermally insulates the tube: the surface stays touchable during and after use, which reduces the risk of burns for the barista and limits milk sticking to the wand.

Construction

Tube Ø 12 mm in AISI 304, oscillating support and water separator for a regular jet.

For machine manufacturers

Italcoppie Sensori supplies the leading manufacturers of professional coffee machines. Lengths, connectors, shapes and materials are adapted to your machine, from prototypes to mass production.

Typical applications

- Distribution of hot water for tea and infusions
- Professional espresso machines
- Preheating cups and pots
- OEM manufacturing of coffee machines
- Distribution of water at controlled temperature

Non-contractual document. Specifications subject to technical changes. Edition 11/2026.

Technical specifications

Reference	N028032A
Technology	U-CAN TOUCH, insulated tube
Tube	Ø 12 mm AISI 304, centered
Temperature probe	Thermocouple K Ø 2 mm, mineral insulation
Support	Oscillating
Broadcast	Water separator
